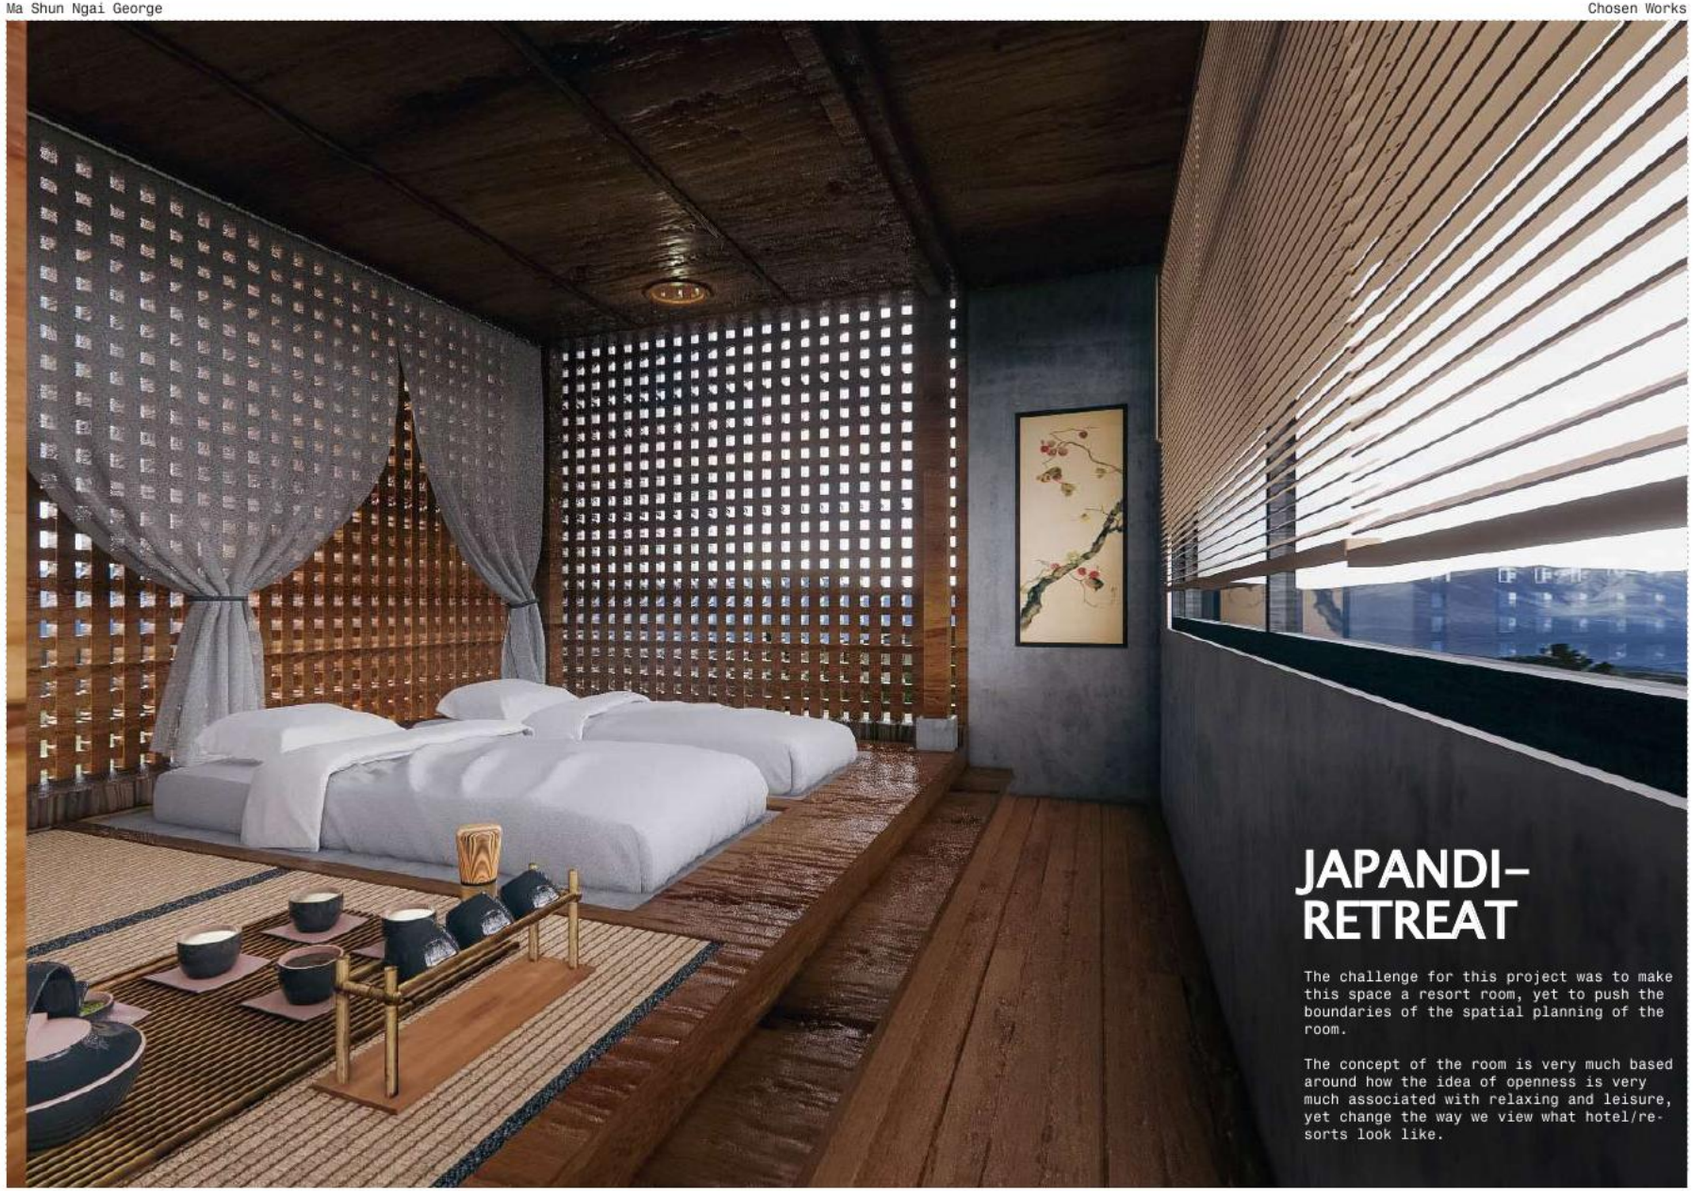
# Japandi Retreat

An L-shaped resort room separates arrival, bathing and sleep. A bathroom wall screens the entrance, while concrete, timber and filtered openings create privacy without closing the room.

View the complete case study online

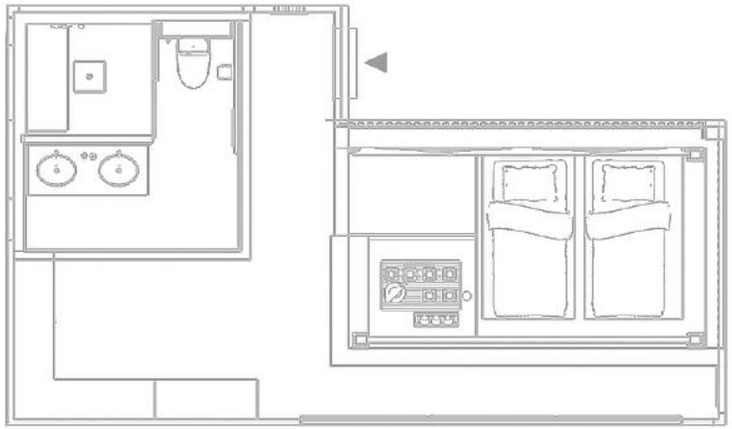


# JAPANDI–RETREAT

The challenge for this project was to make this space a resort room, yet to push the boundaries of the spatial planning of the room.

The concept of the room is very much based around how the idea of openness is very much associated with relaxing and leisure, yet change the way we view what hotel/re-sorts look like.

The Layout of the room is L-Shaped. With the beds tucked away in the corner, it not only hides it away from area of surrounding noise, but keeps the sleeping quarters hidden from the entrance. The toilet wall is the first thing you see upon entering, allowing for users to wash up, before entering the rest of the space and is strategically connected to the wardrobe before heading the sleeping quarters. The sleeping quarters is tucked away and using materials like concrete and wood, to absorb most noise from outside and also prevent conversations from being leaked out. Giving users a assurance of privacy in the space.



# Looking Through the Masks of the City

Sound recordings map Clarke Quay Central across the day. The study becomes a crochet studio built around layered thresholds, woven bamboo and collective making.

LOOKING THROUGH THE
MASKS OF THE CITY

The footwear was supposedly chosen to look like this, that way it would increase the attention of others, and draw my attention my way. In order for the footwear to allow it to produce sound. i decided to tie a few paper binders together, and tie it around a pivot point with the footwear. So when I move, It will hit the ground and produce a jingle

A picture of the wearable device in action, together, with my phone which is strapped to the side of my left leg, just above the device

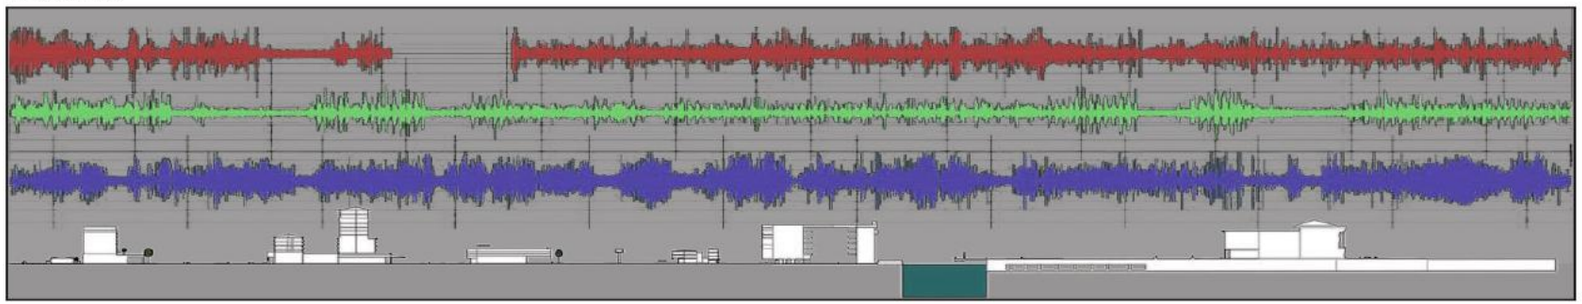
## DETERMINING THE DEVICE TO 'MEASURE' THE CITY:

The Adidas Yeezy Foamrunners

The Paper Binders

The Final Wearable Device

DATA COLLECTED:



For the red, it was one of the first visits that I went to visit the slice while wearing the device, and it was late at night. Thus, it was slightly quieter, thus when entered into much more crowded places and more noise was generated.

For the green, the visit was done in the morning, as you can see, the normal level of the audio recording is similar to that of the night visit. However, there seems to be a difference in the high and low audio levels along the recording.

For the blue, The visit was done during the afternoon during lunch time, resulting in an increase in audio levels and higher anxiety levels, making it difficult to observe contrasts.

## DEEPER ANALYSIS OF THE DATA COLLECTED:

The The white rectangle represents the regular social level when there is no disturbance. This level is observed in various sections of the slice, such as Keng Cheow Street, which is a ghost town in the morning and afternoon, but becomes bustling with bar goers and office workers in the evening. Riverwalk side is also a popular spot, with tourists walking along and occasional office workers passing through, but at night all the exterior restaurants open up their business.ing along and occasional office workers passing through, but at night all the exterior restaurants open up their business, it is comes to life

The translucent sheet of plastic plays with the light, revealing different parts of the space as the day passes.

# The Union

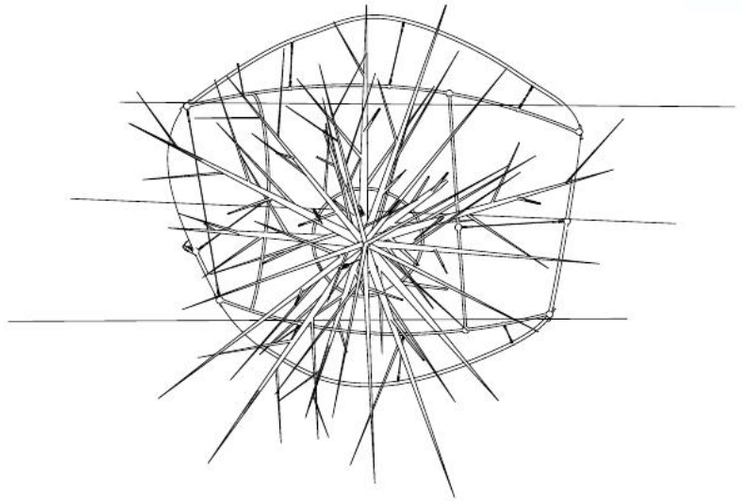
An irregular canopy expands the usable seating beneath an existing tree, manages water build-up and keeps the tree as the gathering point.

View the complete case study online

# THE UNION

Closing the gap between man and nature

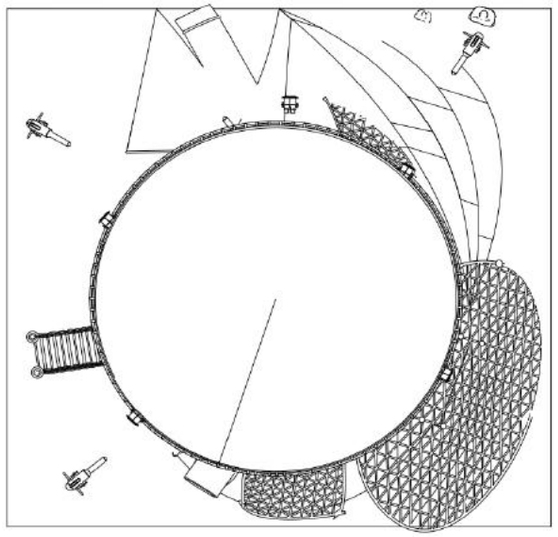
The original concept was how to integrate the space into the focal point of the area, where lay a big tree, with branches stretching out in all areas, as though protecting the space below.
However, with the original site of the targeted space, there were benches, but due to the tree's location, bird excretion often littered the sitting areas, discouraging visitors and potential users from visiting the space.
Thus, the new space wanted to offer protection to the visitors below yet expand the area to be used for more than just sitting. Therefore the canopy was developed into a much more circular shape, yet was not completely flat. This is to allow for not just prevention of water build-up at the top when it rains but also reflects the organic structure of the tree above it, reflecting the curves of the branches.

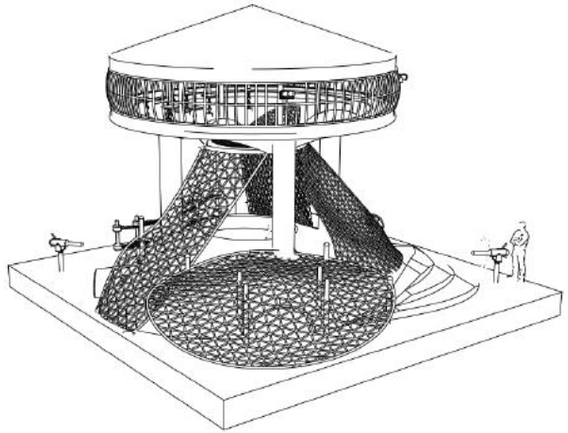


# Watergrounds

A water-tower silhouette becomes a climbable landmark on a hill. Mesh climbing surfaces, wet-play elements and an elevated outlook connect the playground to park and skyline.

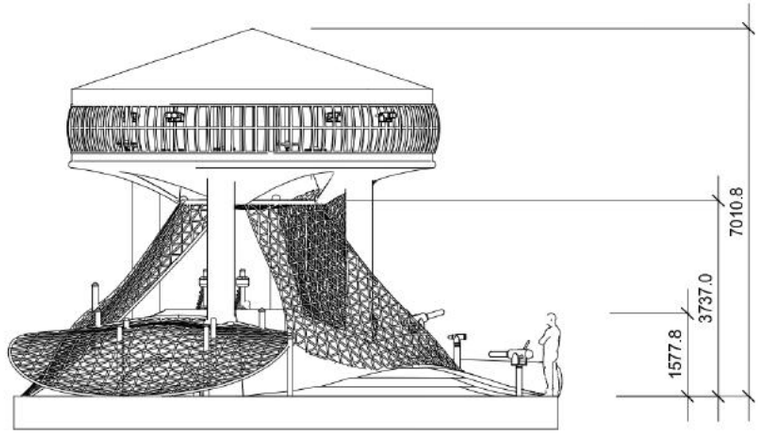
View the complete case study online





# WATERGROUNDS

The site chosen was originally a water play area, so when it came to designing and integrating a play-ground element, the challenge was to integrate the theme of the space with water.
Thus, the design that I did come up with is shaped with the idea of a water tower on a hill, thus you can see the climbing structure is in a shape of a water tower. The various elements and materials were carefully picked so as to ensure that they will last for long despite being exposed wet environments.



# Multi-Generational Bathroom

Created for the American Standard Design Award Competition brief, this compact bathroom coordinates reach, circulation, assistance and privacy for children, adults, older users and future wheelchair use.

View the complete case study online

# AMERICAN STANDARD DESIGN Award Competition:

The objective for this project was to design a multi-generational toilet. It's crucial to consider the diverse needs and abilities of users like safety and privacy.

Overall, a successful multi-generation toilet design should prioritize accessibility, safety, and comfort for every user without compromising on quality.

When designing a bedroom for multi-generational use, all the needs have to be met for their various ergonomics while still creating an aesthetic and timeless space where cleansing and excretion take place. The main functional requirements came from the needs of the elderly; it was assumed even in the future, when the elderly would become weaker when it came to walking or wheelchair-bound, the majority of the space was still accessible.

As for design considerations for the rest of the users, it came down to making the space most appropriate for the elderly. I envisioned it to be connected to the elderly parents' master bedroom. But due to the smaller apartments in HDBs in Singapore, most times, bedrooms will get used by the rest of the family members. Thus, a simple modern aesthetic has been maintained using concrete and wooden beams, yet making the low space maintenance.

# SCA-Lab

A two-level remote-control vehicle lab at Junction 8's roof garden combines making, workshops and community areas with adaptable drone, land-vehicle and aquatic test zones, supported by a connected control app.

Swappable Lense Frame

Swappable Lens

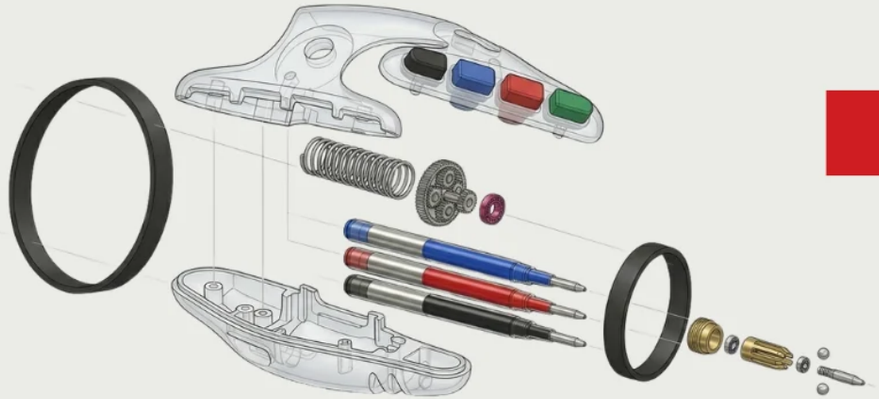
I believe in perspective shift, always looking for the next thing. Always exploration the connection betweeen spaces, people and products.

# SOMEPEN

A 4.5 cm finger-mounted pen for work that involves writing while moving. Four thumb-operated buttons select common D1 refills, while an elastomer ring holds the form on the finger between notes.

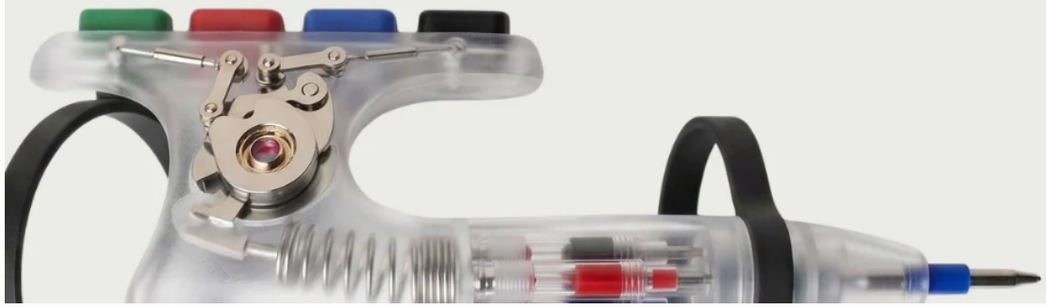
View the complete case study online

ONLY ONE YOU WILL EVER NEED,
ALL AT THE TIP OF YOUR FINGER.
SOMEPEN
EVERDAY
USE



# REINVENTING THE PEN

Utilising the existing D1 refill system, SOMEPEN takes common refills and rethinks them for everyday carry. Four intuitive buttons give instant access to the four most-used ink colours, all operable with a single thumb movement. An ergonomic elastomer ring, positioned on the top of your finger, keeps your grip secure while leaving your hand free for everything else.



Overall Length: 4.5cm
Grip groove: 0.5–1.0 mm depth, with generous radii to avoid local pressure.

## WHO USES IT

# DIFFERENT COLORS. QUICK SCRIBBLES

- Healthcare workers
- Delivery Workers
- Technicians
- Teachers

“Designed for people who move constantly, need to write fast, and can’t afford to carry a handful of pens. Different colors and tools, all at your fingertips, for quick notes, marking, and organizing information on the go.”

# NUS Co-op

In a three-person team, the NUS Co-op experience was mapped across website and store touchpoints. The proposal connects a clearer digital journey, delivery or pickup choices and a zoned community retail layout.
